Product Description

Primanex *MagLight™* 2x2 optical switch is an all solid-state device without any moving parts. The switching of the optical signal is based on well-known Faraday Effect, and realized by using a patent protected non-mechanical configuration with solid-state all-crystal design which eliminates the need for mechanical movement. The microsecond fiber optic switch is designed to meet the most demanding switching requirements for reliability, durability, speed, and none-stopping high frequency switching.

Functional Diagram

(a) At switching state-"0"

(b) At switching state-"1"

Primanex *Maglight™* 2x2 Add/Drop switch has two switching states:

- While at state-"0": the optical light coming from IN1 will transmit to OUT1 in a way of "Add" and the optical light coming from IN2 will transmit to OUT2;
- While at state-"1": the optical light coming from IN1 will transmit to OUT2 in a way of "Drop" but the optical light coming from IN2 will not transmit to OUT1.
